CSE Education Systems Ltd, stand C272

Schools increasingly must manage and report on their core business functions. CSE's new asset manager is designed to give network managers and financial controllers the capacity to manage, monitor and report on all types of assets and their associated cost and, when integrated with CSE's Service Manager, helpdesk and service functions too. It's designed specifically for education establishment so that assets can be categorised to meet individual needs, output reports from the broadest to the most granular level, generate labels and barcodes, and even be alerted that networked assets have moved, or when toner cartridge stock is low.

Lynx Networks, stand F231

Many schools may question, isn't virtualisation expensive? Lynx Networks don't believe it has to be, and has designed a solution to suit schools which includes server virtualisation software, more than 2TB of storage capacity and a server capable of running multiple virtual machines at below the cost of having four physical servers in place. Virtualisation can also help reduce energy consumption and management costs, to aid cost savings and improve performance for schools.

Tripleplay Services, stand F76

Management of video within a school is becoming as important as managing voice and data. The new TripleChoice Education Media Portal from TriplePlay is designed to provide a complete platform that meets all digital media requirements, simplifying management and interaction. Allowing users to customise and personalise the interface, video on demand (VoD) and internet protocol television (IPTV) users are guaranteed a quality, consistent brand image. Utilising several pre-defined layouts, coupled with the ability to amend and edit images, logos and colours, TripleChoice allows full control of output.

OCR, stand B240

To support the push for computer science in schools and support its new computing GCSE, OCR has been working with the team behind Raspberry Pi. New OCR resources to help teachers get the best out of Raspberry Pi in the classroom will be on display at Bett 2013 for the first time. OCR will also be on hand to discuss its partnerships with other high-profile organisations, such as Computing at School, which is supporting the teaching of computer science, plus all the details on OCR's expanding IT qualification ranges, including dedicated qualifications on computing and the computing options within Cambridge Technicals and Cambridge Nationals.

Room Booking System Ltd, stand A180

Attendance at Parents Evenings can be infrequent or irregular. To help streamline this important face-to-face contact time, Room Booking System has developed its online Parents Evening System to help enable school leaders to improve parental engagement at parents' evenings. Instead of the school assigning appointment times for parents or students arranging times with their teachers, parents can now select themselves which times they see each individual teacher at a time convenient to them. With intuitive reports, school leaders can quickly identify which students have yet to book appointments and which parents did not turn up at the parents' evening to allow contact and follow ups to be instigated.

Ergo Computing UK, stand F241

Managing a school is not easy, and Ergo Computing has designed an ultra-thin, ultra-light, high performance device, the Ergo Elite 171 Ultrabook™ to provide Senior Management Teams with a full working day on-the-move with enhanced, longer lasting battery technology. Alongside this, the portable technology is developed to work even quicker with the fact that it is ultra-portable with Intel's® Rapid Start Technology, crystal clear 14.0" LED screen and strong wireless access to provide users with powerful performance that keeps up with the user's needs while creating, exploring and enjoying.

WisePay, stand A140

With a focus on driving improvements and raising standards, schools have greater autonomy to decide how to operate, manage their income and market their services. WisePay is showcasing its new Lettings Bookings & Resource Management Services to address this. This is designed to allow schools to efficiently market their facilities and resources for anything from conference rooms and sports facilities to staff, IT and accommodation bookings. Schools can streamline the income collection and management process, improve their customer experience, track and audit all payments and bookings, improve internal efficiencies and send automated payment reminders by text or email through one single platform.
